

BATCH TYPE TOWER FURNACE

Flexible CAB Brazing for Aluminium Heat Exchangers

NEWS

2026/44

From prototypes and small batches to series production!

Whether you are **entering** aluminium heat exchanger manufacturing or **expanding** an existing production setup, sellacan furnaces are available in different equipment levels –

A scalable solution – growing with requirements: STARTER → ADVANCED → CUSTOMIZED

STARTER CONFIGURATION

Your entry into aluminium brazing

A flexible starting point for companies entering aluminium heat exchanger production – for example, when **switching from copper to aluminium**.

Designed from the outset for future upgrades!

CAB brazing for P&B production

If you already produce or plan to produce **Plate & Bar (P&B) coolers**, the furnace can be configured accordingly.

ONE FURNACE – FLEXIBLE PRODUCTION

- Horizontal or vertical brazing position
- Scalable production from prototypes to series production
- High flexibility for changing products and batch size
- Precise and reproducible brazing conditions
- Individually adjustable heating and cooling profiles
- Efficient batch operation with optimised energy consumption

ADVANCED CONFIGURATION

With Preheater and telescopic/sliding table.

Expandable from Starter or fully configured from the outset.
